SOFT SKILLS

- Teamwork
- Time management
- Critical thinking
- Communication
- Creativity
- Learnability
- Attention to details

PROFILE

Qualified and creative Front-end developer with almost 2 years of both team and solo work experience and the background of working with international company. I have ability to quickly adapt to the requirements of the project and optimize my work. At my previous workplace I managed to achieve the production rate of two landing pages per working day. My main hard skills (React, JavaScript, CSS, HTML) are confirmed on my LinkedIn profile according to the results of relevant tests.

EXPERIENCE

Front-end Developer at AdversterX [09.2024 - up to now]

As front-end developer at AdversterX, I was responsible for implementation of landing pages and multi-page websites of varying complexity based on Figma layouts, as well as making changes to the company's existing projects using the following technologies: Gulp, Pug, SCSS, VanillaJS. In addition, I had experience in fixing bugs of other developers. The process of completing the assigned task included the development of the website according to the provided layout, uploading it to the test server and, after testing, uploading it to the server using the provided ftp-access. During my tenure, I implemented 63 fully-fledged websites.

React Developer at Individual Entrepreneur Kyryllova T.V. [01.2024 - up to now]

The project represents multipage website for renting offices in Dnipro city, Ukraine. The website includes animation implemented using GSAP technology.

The current version of the website can be found by link:

https://smyrnova-iryna.github.io/HouseRent/

React Developer at UAB «FerroMetals» [02.2023 – 09.2024]

I was responsible for developing of the company`s corporate website (in the activity "Woodworking machines production and sale"). A feature of the project is the work with complicated graphic design, presented in the desktop version of the site, which included in-depth work with svg (the adaptive version of the site retains the initial aspect ratios of geometric shapes and degree measures of angles even with dynamic changes in screen size).

The current version of the website can be found by link:
